

Moen Citrus Assembly

You should have:

- 2 side panels (A)
- 2 back panels (B)
- 1 base with casters (C)
- 2 large front panels (D)
- 4 small front panels (E)
- 6 shelf floor panels (F)
- 6 bolts (G)

1. Make up shelf assemblies first by sliding shelf fronts (E,D) onto shelf floors (F). Slide the front onto the tab from **right to left** - (if you can't put them on from right to left then the shelf floor needs to be flipped over).

2. Place the back panels (B) onto the base (C) with the tabs going into the slots on the base - you'll need someone to support the backs for now.

3. Take the shelf assemblies and insert the tabs at the back of the shelf floors into the slots in the back panels again sliding from **right to left**. Remember that the shelf assembly with the **large front goes at the bottom**.

4. Once the shelf assemblies are all attached, apply the side panels (A), again by inserting the tabs on the back panels (B) through the slots in the side panels, once the tabs are all through push the side panels downwards until they seat themselves into the small notches in the tabs.

5. Insert the tabs on the shelf fronts into the slots in the sides. Once the tabs are through, push down on the fronts to seat the tabs firmly over the side panels.

6. Insert the bolts through the holes at the bottom of the side panels and into the dowel insert in the base. Tighten securely.
