

## Moen "Flip" Braille Desk

### Assembly instructions:

Place smaller panel upside down, place plastic washers over mounting plates then place L shaped panel, also face down, on top of first panel with leg holes over mounting plates.

Put longer legs with flanges through lower L-shaped layer and screw into mounting plates.

Place shorter legs over inserts on lower level, use bigger screws and lock washers to fasten these legs.

Then lift L-shaped lower level up to flanges on longer legs and insert smaller screws through holes in flanges and into pre-drilled holes.

IF you have requested a desk with separate leg adjusters, to accommodate a child's growth. Once you find a need to add height - insert the new adjusters into the existing leg insert.
